Industrial Augmented Reality

Readers of Fintalk by now may be aware about interesting applications of Augmented Reality (AR). It is not limited to just entertainment but extends to industrial sector as well. As per **ISACA** survey, 64% of US consumers believe that augmented reality enhancements would benefit workplace by facilitating in workplace learning and development.

Augmented Reality is poised to radically improve manufacturing and logistics. In manufacturing, AR can superimpose holographic images and instructions onto industrial objects, which is immensely valuable for educating workers on how to use large machinery or specialized devices. In logistics and supply chain management, AR applications may be used to streamline the time taken to identify a package and determine its route and destination. For example, an AR mobile app or wearable device can project information such as type of goods transported, package's weight, and details of its fragility.

A number of companies have already come up with AR-based apps for industrial employees. For example, Industrial AR Company **Atheer** has created an enterprise AR application that provides remote subject matter calling, access to contextual documentation and resources, step-by-step task guidance and barcode scanning — all of which can be directly transmitted to an on-site employee's smart glasses. On the other hand, German logistics firm **DHL** is testing mobile AR systems that provide real-time object recognition, barcode reading, and indoor navigation. Wearing one of these devices,

Digital payments industry divided over data order

The directive to digital payment companies from the country's central bank mandating them to store all user data on servers within India, has sharply divided the industry. Local companies including Paytm and PhonePe have welcomed the move.

warehouse workers can see digital picking lists in their field of vision and determine the best route thereby reducing their travel time.

Apart from logistics and supply chain management, AR is used to assist in the maintenance of manufacturing equipment. For instance, **Mitsubishi Electric** is developing AR based maintenance-support technology which is based on a 3D model that enables users to confirm the order of inspection on an AR display and then enter inspection results vocally. Similarly, elevator manufacturer **ThyssenKrupp** is leveraging **Microsoft's** HoloLens technology as a tool for service technicians to visualize and identify problems with elevators ahead of a job and have remote, hands-free access to technical and expert information on site.

Be it optimisation of operations in warehouse or be it employee training, AR technology has diverse potential applications in the entire global supply chain. Though the technology is deployed for limited use cases, its utility is poised to take off as companies are beginning to see an immediate return on investment on AR-based products.

PM Modi's Singapore visit to put India's RuPay card on global stage

One of the high-profile announcements during PM Narendra Modi's Singapore visit could be the launch of mutually acceptable digital wallets between Indian and Singaporean citizens.

The transactions would be hosted by Indian government's NPCI — an umbrella organization for all retail payment systems in India — with its RuPay cards and Singapore's equivalent system, Network for Electronic Transfers or Nets. Just as NPCI's mandate is to promote digital payments in India, Nets has the mandate of the Monetary Authority of Singapore to become the preferred digital payments system.

Banks get a digital nudge, play catch up with fin-tech start-ups

While fin-tech startups might be reaping the benefits of India trying to digitize its economy, banks are not way behind. Over the last year, these legacy institutions have been elevating their digital game to remain relevant to techsavvy customers. Data shared by banks for the previous financial year shows that payments across cards, smartphones and QR code-based transactions have jumped consistently.

ICICI Bank reported a 184% jump in average volume of card payments over the last three years. Kotak Mahindra Bank reported a 100% year-on-year growth in mobile phone based transactions. SBI has said that 21% of its transactions now happen through net banking as against 18% last year.

Al predictions may not always lead to better decisions

Increasing use of artificial intelligence (AI) need not always lead to better decision making, argues a recent National Bureau of Economic Research (NBER) working paper by Ajay K. Agrawal, professor at Rotman School Management, and co-authors. While ΑI can improve predictions of future outcomes, it is not always able to judge which outcomes are better or which course of action to choose.

Ola follows Flipkart, moves to a group company structure

Ola is adopting a holding company structure similar to that of India's most successful internet startup Flip-kart to boost the cab-hailing company's valuation and improve the management of its businesses, four people familiar with the matter said.

Ola will set up a holding company that will own different units, including its core cab business, food delivery app Foodpanda and the nascent businesses of electric vehicles and the international unit, the people cited above said on condition of anonymity. These businesses and some others are expected to have their respective heads who will run them independently, the people said.

Innovation in the age of data protection

Data is one of the most valuable assets in our current global economy. The data revolution is similar to the game-changing industrial revolution in spurring innovation by leaps and bounds. Data-based services encroach upon every realm of our existence and their impact is significant. Just 15 or 20 years ago, the innovations of today would have been inconceivable except in the heads of research scientists or sci-fi fiction writers.
